CONTENTS

What's in this kit

Each section below is a standalone **pitch document**. Use them à la carte — the One-Pager for a 60-second send, the Elevator deck for a coffee meeting, the Investor brief for a deck cover, the ICP scripts for sales calls, the FAQ for objection handling, the Appendix for evidence and citations.

01	One-Pager · Executive Summary	p. 03
	The whole company in 500 words. Cover slide of any deck.	
02	Elevator Pitches · 10s · 30s · 2 min	p. 04
	Memorise these. They're the same sentence at different resolutions.	
03	The Problem	p. 05
	A €100k–€2M-a-year importer runs their process out of email threads.	
04	The Solution & Five-Stage Journey	p. 06
	Find · Verify · Ship · Finance — one workspace, one bill.	
05	Product · What We Built	p. 07
	7 calculators · 5 AI agents · 180-page compliance library.	
06	The Moat · Why We Win	p. 09
	Four sources of defensibility, in descending order of durability.	
07	Market & ICPs	p. 10
	Polish e-commerce · German Mittelstand · Specialty retail.	
08	Business Model · Two Revenue Streams	p. 12
	Subscriptions for access · Transactional fees per shipment.	
09	Competitive Landscape	p. 13
	Where the empty quadrant is and why it stays empty.	
10	Traction & Status	p. 14
	Feature-complete · 1,200 automated tests · pre-revenue.	
11	Go-to-Market · The Next 90 Days	p. 15
	SEO library, founder outbound, partner referrals — in that order.	
12	Team & Company	p. 16
	Three founders · three jurisdictions · cap table.	
13	The Ask	p. 17
	What we want, what we'll do with it, what we won't do.	
14	FAQ & Objection Handling	p. 18

The ten questions every investor and customer asks.

15	Messaging Matrix & Sales Scripts	p. 19
	What we say × who we say it to. Cold-email templates.	

16	Appendix · Brand & Evidence	p. 21
	Colour, type, voice rules. Source docs and citations.	

Executive summary

OrcaTrade is the operating system for European SMEs importing from Asia: AI agents and verified supplier infrastructure that take a buyer from "I don't know how to do this" to goods on the warehouse floor.

What it is

A trilingual workspace (EN/PL/DE) combining **seven deterministic calculators** (sourcing, routing, customs, warehousing, FX, TCO, working capital), **five specialised AI agents** (sourcing, compliance, logistics, finance, plus an orchestrator), an **EU-compliance overlay** covering CBAM, EUDR, REACH, CE, RoHS, AD/CVD and 15 preferential-origin pathways, and a curated **asset-light execution layer** that reaches back through partners into Hong Kong.

Why it works

Every monetary number in the product traces to a deterministic calculator the customer can audit. Agents reference calculator outputs by tool call — they do not estimate. Every regulatory claim cites EUR-Lex by celex number. **The LLM never produces a number that drives a business decision.** That single architectural rule is the difference between a credible piece of trade infrastructure and a chatbot.

Why now

CBAM enters its definitive period in 2026. EUDR scope expanded December 2025. REACH SVHC drift accelerates. Alibaba is breadth without calibration; SAP GTS and Oracle GTM are six-figure enterprise contracts. The €100k–€2M-a-year European importer sits in a market gap so wide that 15–30% of landed cost is silently lost to FX margin, sub-optimal routing, missed preferential-origin pathways, and uncalculated compliance exposure.

Where we are

1,200 AUTOMATED TESTS	180+ CONTENT PAGES, TRILINGUAL	5 AI AGENTS SHIPPED	€99–999 MONTHLY TIERS, LIVE
------------------------------------	---	----------------------------------	--

Feature-complete · pre-revenue · GTM commencing 2026. The binding constraint going forward is no longer engineering — it is go-to-market.

The ask, in one line

Pre-seed capital to convert a built product into the first ten paying logos and to underwrite the Hong Kong supplier-vetting operation that competitors structurally cannot replicate.

Master brand line — Find it · Verify it · Ship it · Finance it — one platform, Asia to Europe.

The same sentence at three resolutions

Memorise these in order. Each is the same argument; each is allowed more breathing room. Match the version to the audience: a LinkedIn DM gets the 10-second; a coffee meeting gets the 30-second; a partner call gets the 2-minute.

10 SECONDS · LINKEDIN DM, LIFT-PITCH, INTRO AT A CONFERENCE

"One platform for European SMEs importing from Asia: find suppliers, ship goods, stay compliant — with AI agents that cite the regulations and Hong Kong boots on the ground."

30 SECONDS · COFFEE MEETING, SALES DISCOVERY, FIRST CALL

"OrcaTrade is the operating system for SMEs importing from Asia. Most importers run their process out of email threads — supplier on Alibaba, freight broker on WhatsApp, customs broker by phone, no single view. We replace that with one platform. Five AI agents handle sourcing, compliance (CBAM/EUDR/REACH/CE), logistics, customs, and finance. Every recommendation cites a regulation or a deterministic calculator — never guesswork. Hong Kong office for supplier verification on the ground."

2 MINUTES · PARTNER PITCH, INVESTOR SCREENING, PODCAST BIO

OrcaTrade is the operating system for European SMEs importing from Asia. We built this because Polish and German importers in our personal networks were drowning in process — eight different vendors per shipment, five different communication channels, no audit trail when CBAM season hits.

The platform has three layers. *Layer one* is the AI agent suite — five specialists (sourcing, compliance, logistics, finance) plus an orchestrator that routes across them. Every claim cites either an EU regulation chunk or a deterministic calculator. Twenty-five tools, total.

Layer two is operational tooling: HS-code lookup, customs clearance estimator, bonded-warehouse comparison, six-hub 3PL benchmark, payment-instrument comparison, FX hedging cost calculator. The math is shown to the customer — never a black box.

Layer three is execution through partners. Sample consolidation in our Hong Kong office. Supplier verification on the ground. Forwarder bookings through DSV / Kuehne+Nagel / Röhlig. Insurance via Atradius / Coface. We're asset-light by design.

The thesis is simple: SME importers can't afford a 50-person trade-ops team, but they can pay ~~€99~~ ~~€999~~ a month for the AI version of one. **We're the layer between Alibaba and the**

How a typical EU importer operates today

Imagine a Polish e-commerce founder bringing **€25,000 of woven apparel from Vietnam to Warsaw**. Today, here is how their day actually goes:

STAGE	REALITY
Sourcing	Alibaba browser tabs and WhatsApp threads with three supplier-side sales agents. No single record of who quoted what, when, or against which spec.
Freight	Priced ad-hoc through a forwarder's Excel quote that arrives 36 hours after the request. No independent benchmark. No way to compare sea, air, and rail on the same goods.
Customs	Clearance happens through a broker the customer has never met. MFN duty appears on the invoice with no way to verify whether a preferential-origin certificate (EUR.1, GSP+, EBA) would have eliminated it.
Compliance	A fog. CBAM applies to some of these goods. EUDR will apply from December. REACH SVHC limits are real. None of this is surfaced until the customs broker raises it at the wrong moment.
Working capital	Sized by feel. The customer does not know that paying their supplier on T-30 frees up two weeks of cargo value as cash. The FX leg — USD-quoted, EUR-paid — is silently costing 2–4% per shipment.

Net effect: the customer routinely overpays *15–30% of total landed cost* relative to what an experienced trade-operations team would deliver, and bears compliance risk they cannot price.

Why incumbents don't solve this

<i>ALIBABA IS BREADTH WITHOUT CALIBRATION.</i> 50,000 results for "apparel manufacturer Vietnam". No signal on which is auditable, which has EVFTA-eligible documentation, which has produced for an EU buyer before.	<i>BIG FORWARDERS IGNORE SMES AT OUR TIER.</i> DSV, K+N, DB Schenker, Maersk, Flexport, Forto, Forto — commercially they cannot staff against a €25k shipment. Sourcing, vetting, and compliance are out of scope.
---	--

*ENTERPRISE GTM IS THE
WRONG SHAPE.*

SAP GTS, Oracle GTM, Thomson Reuters
ONESOURCE. Six-figure annual licences.
Twelve-month implementations. The Polish
founder sees these and bounces.

*SPREADSHEETS + EMAIL IS
THE ACTUAL DEFAULT.*

Works at volume zero. Breaks somewhere
between shipment five and shipment fifty,
usually after a CBAM-eligible cargo arrives
uncalculated.

The gap between "free + chaotic" and "enterprise + €200k/year" is precisely the gap OrcaTrade fills.

One workspace, one bill, the five-stage journey

OrcaTrade reframes four pre-existing OrcaTrade Holding business units plus one new pillar as **stages of a single integrated journey**. The platform is the answer to all five inside one workspace, one shared customer record, one consolidated bill.

STAGE · 01 Search Which countries and factories should I even consider?	STAGE · 02 Sourcing Which specific supplier wins this RFQ?	STAGE · 03 Intelligence Is this supplier safe? Am I compliant?	STAGE · 04 Logistics How do I actually move and clear the goods?	STAGE · 05 Finance How do I pay, hedge, and finance the deal?
--	---	---	---	--

What the customer experiences

A six-question wizard at /start/ takes any prospect from cold to a full landed-cost analysis in 90 seconds — every number traceable, the analysis shareable as a permalink, save-to-account when signed in. From there, the customer can talk to any of the five agents, save plans to a per-user history (with a "what's changed since" delta on revisit), open the implementation roadmap (15–25 conditional tasks per plan), and toggle every monetary value into EUR / USD / CNY / VND / PLN at snapshot rates.

How it all hangs together

LAYER 1 AI AGENT SUITE 5 specialists + orchestrator. 25 tools. Every claim cites a regulation chunk or a calculator output. Tier-gated.	LAYER 2 OPERATIONAL CALCULATORS 7 deterministic engines. Pure JavaScript modules. Run identically in the browser, in the agent tool layer, and in saved-plan diffs.	LAYER 3 EXECUTION THROUGH PARTNERS DSV / K+N / Röhlig for forwarding. QIMA / AsiaInspection for QC. Wise / Convera for FX. Atradius / Coface for credit. HK office for samples.
--	--	--

03 · PROBLEM
04 · SOLUTION
05
06
The thesis is simple. The European SME importer cannot afford a 50-person trade-operations team. They can afford €99–€999 per month for the AI version of one.

What we built

The seven calculator engines

Every output traces to inputs the customer can audit. **No black-box AI estimates.** Each engine is a pure JavaScript module with full unit-test coverage and is callable as a tool by any agent.

ENGINE	WHAT IT ANSWERS
sourcing-quote	Which of 5 candidate origins (CN/VN/IN/BD/TR) wins on FOB price × MOQ × lead time × IP risk for this category?
routing-quote	What are sea, air, and rail prices and transits for this lane, and which is recommended?
customs-quote	What is duty + VAT + brokerage on this HS code into this destination — and is bonded warehousing better?
warehouse-quote	Which of six EU 3PL hubs (Poznań · Frankfurt · Hamburg · Rotterdam · Barcelona · Prague) is cheapest for this volume profile?
fx-quote	What is the FX exposure on a non-EUR-quoted purchase, and is hedging economic at this size?
tco-quote	What is annual total-cost-of-ownership including inventory carrying cost at the customer's WACC?
working-capital	What is cash tied up in inventory + receivables – payables, and which lever (DPO+30, ship-frequency, etc.) frees the most?

The five AI agents

Each agent has a defined system prompt, a defined toolset, and a defined tier-gate. All run on **Anthropic Claude Sonnet 4.6** in production, with the orchestrator surfacing Opus on demand. Every agent ships with a request_human_review tool. **Agents do not autonomously commit to bookings or sign contracts.**

AGENT	TIER	SCOPE
Compliance Agent	FREE	EU regulatory landscape — HS classification, duty + VAT, applicable regimes (CBAM, EUDR, REACH, CE, RoHS, food contact, toy safety, textile labelling). Cites every claim against EUR-Lex.
Sourcing Agent	STARTER+	Category × origin recommendation, RFQ drafting, MOQ + lead-time clarification.

AGENT	TIER	SCOPE
Logistics Agent	GROWTH+	Sea / rail / air mode comparison, Incoterm advisor, customs clearance route comparison, document checklist.
Finance Agent	GROWTH+	Payment-instrument comparison (LC vs TT vs DA/DP), FX hedge sizing, working-capital optimisation, trade-finance referrals.
Operations Orchestrator	GROWTH+	Meta-agent routing across the four specialists. 14 unique tools after deduplication. The customer dashboard surface.

Tier-quota gating enforces 20 queries/month free, 200 Starter, 1,000 Growth, unlimited at Scale and Enterprise.

The EU-compliance overlay & workspace

180+ trilingual pages, all calculator-grounded

A structured catalogue of every EU regulation an importer needs to surface against, with per-product applicability rules and citation-grounded summaries. Each page is generated from the same `composePlan()` engine that powers the live wizard. SEO content and product-led growth are the same artefact.

TRADE-DEFENCE DOSSIERS

32 active product-origin pairs. Chinese e-bikes (87% combined AD+CVD), Chinese cold-rolled steel, Egyptian fibreglass fabric, Indonesian stainless, Indian stainless, Turkish cold-rolled steel.

PREFERENTIAL-ORIGIN PATHWAYS

15 active regimes — EVFTA, EUKFTA, EUJEPA, A.TR, EBA, GSP+, GSP standard — plus per-origin guides for VN / IN / BD / PK / TR / KR / JP.

COMPLIANCE REGIME OVERLAYS

14 regimes — CBAM, EUDR, REACH, RoHS, WEEE, GPSR, PPWR, Battery, Cosmetics, Toy Safety, CE Machinery, CE LVD/EMC/RED, Footwear Labelling.

CUSTOMS & SOURCING GUIDES

36 origin-destination customs guides (CN/HK/IN/TR/VN × 6 EU destinations) and 40 category-origin sourcing guides (8 categories × 5 origins).

WORKED EXAMPLES

8 anonymised end-to-end import plans with calculator-grounded numbers — Bangladesh apparel under EBA, Korean machinery under EUKFTA, Turkish steel with A.TR + AD layered, Chinese e-bike under 87% combined.

SEO FUNNEL

Every page funnels into the wizard via base64-encoded pre-filled permalink. The library compounds — new measures add pages, wizards, agent tools, and saved-plan branches simultaneously.

The workspace

- **Magic-link authentication** — no passwords, HMAC-signed session cookies, 30-day TTL on Vercel KV (Upstash Redis), durable across cold starts.
- **Saved plans + history** — up to 50 plans per user (1-year TTL). Each plan stores a 6-field landed-cost snapshot; on revisit the platform recomputes against current pricing and surfaces a "what's changed" delta at $\geq 5\%$ significance.
- **Implementation roadmap** — a 5-phase, 15–25-task week-by-week sequence (pre-departure, production+QC, logistics+customs, arrival+inland, post-arrival) with conditional branches: preferential-origin certs, trade-defence TARIC checks, CBAM quarterly cadence, FX forward execution, payment-terms negotiation.

- **Currency display toggle** — every monetary value re-renders in EUR / USD / CNY / VND / PLN at snapshot rates. Preference persists in localStorage.
- **Conversion analytics dashboard** — /dashboard/leads/, token-gated, surfaces durable event log: category mix, route mix, locale mix, email-capture rate, mean landed total.
- **Founder outbound composer** — /agent/outbound/, brand-voice-pinned cold-email drafter routed through the orchestrator.

Distribution surface

/start/ · six-question wizard · agents/ · public agent surfaces · guides · 180-page library · examples/ · 8 worked scenarios · /marketplace/ · curated supplier shell · /pricing/ · 5-tier comparison · /partners/ · 3-mode partner ecosystem · /press/ · brand kit · /feed.xml + /atom.xml · 185-item syndication.

Four sources of defensibility

In descending order of durability:

01 · MOST DURABLE

CALCULATOR-GROUNDED RECOMMENDATIONS

Every number in the platform — duty rates, freight cost, FX risk, working-capital impact, landed cost — is computed from a deterministic model the customer can audit. Agents reference outputs by tool call; they do not estimate. When asked "what's the duty on Chinese cold-rolled steel into Poland," the system does not guess — it calls customs-quote, which reads from structured TARIC + AD/CVD data.

Invisible against a flashy demo. Decisive once a customer has been burned by an LLM hallucination.

02

EU-SPECIFIC COMPLIANCE KNOWLEDGE

CBAM, EUDR, REACH, CE, RoHS, AD/CVD, preferential-origin pathways. American AI platforms in this space don't have this depth. European compliance software is enterprise-tier (€200k+/year). The middle is empty.

Replicating this is years of capital-O Operations, not a sprint.

03

HONG KONG PHYSICAL PRESENCE

OrcaTrade Asia Ltd — operated by co-founder Nigel Lam — handles in-person supplier verification, sample consolidation, and dispute resolution. Pure-digital forwarders cannot match this at the SME price point. A chatbot cannot walk into a factory in Shenzhen.

04

AI-NATIVE ARCHITECTURE

Five specialised agents plus an orchestrator. Every claim cited against EUR-Lex chunks or a deterministic calculator output. Built day-one with full tool-use plumbing — not a chatbot grafted onto a legacy stack.

The operating principles behind the moat

Calculator-grounded over generative	Every monetary number traces to a deterministic calculator. If we cannot calculate it, we say so.
Calibrated trust over breadth	We do not index the whole of Alibaba. The future supplier directory ships with 50 vetted suppliers, not 500,000. Editorial restraint is the product.
Citation discipline	Regulatory claims cite EUR-Lex. AD/CVD figures cite the relevant Implementing Regulation by celex number. If we cannot cite it, we don't claim

	it.
Human-in-the-loop on irreversible actions	Agents do not autonomously sign contracts, commit to bookings, or transmit payments. Customer trust is fragile.
Trilingual by default	Every product surface in EN / PL / DE. Polish customers see Polish copy. German customers see German copy. No "international English" fallback.
Asset-light execution	No warehouses, ships, or customs licences. Value lives in the layer above — supplier intelligence, AI tooling, HK presence — not in capital-heavy infrastructure.

ORCA TRADE FITCH KIT V1.0

06 THE MOAT

OrcaTrade sits in a deliberately empty quadrant: SME-priced, EU-regulation-deep, AI-native, calculator-grounded, with physical Asia presence. The combination is the moat.

Who we sell to

Three ICPs, listed in order of GTM priority.

ICP 01

Polish e-commerce founders

"Stop running imports out of email threads."

Who	Allegro sellers, Amazon FBA operators, multi-channel D2C brands.
Volume	€50k-€500k annual import volume from Asia
Pain	Patchwork process. Supplier on Alibaba, freight broker email, customs broker on WhatsApp. CBAM/EUDR/REACH compliance is a black box.
Lead artefact	Free Compliance Agent + Routing calculator. Hook: "stop running imports out of email threads."
Channels	Polish-language LinkedIn, Allegro seller communities (Facebook groups), Polish e-commerce Slack, founder-led outbound.
Pricing entry	Free → Starter €99/mo

ICP 02

German Mittelstand

"Regulatory precision at SME pricing."

Who	Manufacturing SMEs sourcing components from China/Vietnam. Often family-owned, conservative.
Volume	€500k-€2M annual import volume
Pain	Compliance risk is existential. CBAM Article 26 penalties, EUDR scope from December 2025, REACH SVHC drift. Big forwarders (DSV, K+N, DB Schenker) ignore them at this tier.
Lead artefact	Compliance Agent demo + sample analysis PDF.
Channels	German LinkedIn, trade-publication advertorials (Logistik Heute, DVZ), curated webinars with HK partners.

ICP 03

Specialty retailers and brand owners

"From sample to shelf with one partner."

Who	Premium DTC brands, niche product specialists, slow-fashion and heritage brands.
Volume	5-50 shipments per year – low frequency, high consideration
Pain	Quality is everything; one bad shipment kills brand trust. Need supplier audits, sample QC, returns handling.
Lead artefact	Sourcing Agent + sample-management quote (paid trial).
Channels	Founder-led LinkedIn, niche industry publications, partner-network referrals.

Market sizing & opportunity

The directly addressable EU SME importer base

The European Commission counts roughly **620,000 EU SMEs** that import goods of record from outside the bloc in any given year. Roughly **180,000 of these import from Asia at €50k+ annual volume** — the upper band of our addressable customer. Concentrate on Poland, Germany, the Netherlands, France, Italy and the addressable count remains in the **~110,000** range. Polish e-commerce alone (Allegro + Amazon FBA + D2C) numbers **30,000+ active SME importers** by 2025 data.

~620k EU SMES IMPORTING ANNUALLY	~180k SMES IMPORTING FROM ASIA · €50K+	~110k IN ORCATRADE'S TOP-5 EU MARKETS
--	--	---

TAM / SAM / SOM, deliberately conservative

LAYER	DEFINITION	ANNUAL VALUE
TAM	180k SMEs × €3,000 blended ARR (subscription + transactional)	€540M
SAM	110k SMEs in top-5 EU markets × €3,000 blended ARR	€330M
SOM · year 3	2.0% penetration of SAM → 2,200 logos at €3,000 blended ARR	€6.6M
SOM · year 5	5.0% penetration of SAM → 5,500 logos at €3,500 blended ARR (mix shift to Growth/Scale)	€19.3M

Note on the blended ARR: we assume 60% of customers on Starter (€990 annual), 30% on Growth (€3,990), 10% on Scale/Enterprise (avg €15,000), plus transactional fees averaging €600/customer/year. Conservative — we expect the Growth band to expand as the platform proves itself against multi-shipment workflows.

Adjacent wedges (deliberately deferred)

- **White-label trade-finance origination** — referral economics on customer LTV with Tradeshift / Stenn / FreshFi.
- **Buyer-side verification for Asian exporters** — the inverse use-case, productised at €99/mo.
- **Forwarder-side coordination layer** — selling the orchestrator as middleware to forwarders themselves; explored after we have 100+ shippers
- **Multi-currency wallet** — €49/mo add-on. Hold EUR/USD/CNY/HKD/PLN, hedge exposure, settle suppliers.

Two revenue streams, one bill

Stream 1 · Subscriptions for access

Customers pay whether or not they ship in any given month — they pay for access to the platform.

TIER	MONTHLY	ANNUAL	CUSTOMER PROFILE
Free	€0	€0	Lead-gen, evaluators, single-shipment users. 20 agent queries/mo. Compliance Agent only.
Starter	€99	€990 (save €198)	Solo importers, FBA sellers. Sourcing + Compliance + 200 queries/mo.
Growth	€399	€3,990 (save €798)	Established SMEs, 5–50 shipments/year. All 5 agents + orchestrator + 1,000 queries.
Scale	€999	€9,990 (save €1,998)	Mid-market, 50+ shipments/year. Unlimited queries + API access.
Enterprise	Custom (from €2,500/mo)		Custom Manufacturers, distributors, retail chains. White-label, ERP integration, dedicated AM.

Every paid tier includes a 14-day trial. EU VAT handled via Stripe Tax. Annual is two months free, framed honestly as "pay 10, get 12." Tier entitlements encoded in `lib/tiers.js` as the single source of truth.

Stream 2 · Transactional revenue

Per-shipment execution fees, paid as the customer ships:

- **Service fee per shipment** — €150–€2,500 depending on tier and complexity.
- **Freight markup** — 8–15% on freight cost, resold from forwarder partners.
- **Customs clearance** — per-declaration fee through licensed broker partner (Polish *agencja celna*).
- **Inspection services** — pass-through to QIMA / AsiaInspection with a small coordination fee.
- **Trade-finance origination** — % per deal, referred to Tradeshift / Stenn / FreshFi.
- **Cargo insurance** — per-shipment commission, panel placement.

Higher subscription tiers receive transactional discounts: 5% off shipment fees on Starter, 10% on Growth, 15% on Scale.

Stream 3 · Add-on modules

MODULE	PRICE	WHAT IT DOES
Sustainability Reporting Pro	€199/mo	Automated CBAM, EUDR, Scope 3 per shipment, per supplier, aggregated annually.
Industry Compliance Pack	€149/mo	Vertical deep-dives — Electronics, Textiles, Food, Toys, Cosmetics.
Buyer Verification	€99/mo	Score European buyers using KRS / Handelsregister / Companies House + credit data.
Multi-currency Wallet	€49/mo	Hold EUR/USD/CNY/HKD/PLN balances, hedge, settle suppliers.
Premium Agent Pack	€299/mo	Early access + custom system-prompt training on customer's historical shipments.
Dedicated Account Manager	Included	Scale and Enterprise tiers.

The combination — subscription for access, transactional for outcomes, modules for depth — means a single Growth customer routinely lands in the €8,000–€15,000 annual ACV band once they ship at expected frequency.

ORCA TRADE

PITCH KIT V1.0

08

BUSINESS MODEL

11

The empty quadrant

OrcaTrade sits in a deliberately empty quadrant: **SME-priced, EU-regulation-deep, AI-native, calculator-grounded, with physical Asia presence**. Each existing player occupies one or two of these axes. None combine all of them.

CATEGORY	EXAMPLES	WHAT THEY DO WELL	WHY THEY DON'T FIT OUR ICP
Marketplaces	Alibaba, Made-in-China, Global Sources	Breadth of supplier listings	No vetting layer, no compliance, no execution, no curation
Pure-digital forwarders	Flexport, Forto, Beacon	Slick freight booking UX	Forwarder-first; no sourcing or compliance; SME-tier coverage thin in Europe
Traditional forwarders	DSV, Kuehne+Nagel, DB Schenker, Maersk	Capacity, scale, reliability	Ignore SMEs at our volume tier; no AI, no compliance overlay, no integrated intelligence
Enterprise GTM software	SAP GTS, Oracle GTM, Thomson Reuters ONESOURCE	Comprehensive enterprise compliance	Six-figure annual licences, twelve-month implementations; SME never qualifies
Customs-broker software	Descartes, AKL, ASYCUDA-aligned tools	Filing automation for licensed brokers	Sold to brokers, not importers; opaque to the actual buyer
AI trade copilots	Various US-based startups	AI fluency	American-centric data, no EU regulatory depth, no Asia presence, no calculators
DIY / status quo	Spreadsheets + email	Free, infinitely flexible	Breaks somewhere between shipment 5 and shipment 50, usually after a CBAM-eligible cargo arrives uncalculated

What we are not

- ✗ We are **not** a marketplace. We curate — 50 vetted suppliers, not 500,000.
- ✗ We are **not** a forwarder. We coordinate execution; we don't own ships or warehouses.
- ✗ We are **not** a customs broker. We work alongside licensed brokers in each jurisdiction.
- ✗ We are **not** a chatbot. Calculators are deterministic; agents call them as tools.
- ✗ We are **not** "AI-first as a feature." We are AI-native as an architecture — every claim cited or calculated.

What competitors cannot replicate quickly

- ✓ 180+ trilingual EU-regulation pages, all calculator-grounded
- ✓ 32 active trade-defence dossiers with celex-cited AD/CVD rates
- ✓ A Hong Kong office that walks into factories
- ✓ An EU-Lex-cited compliance agent built before the LLM hype cycle pushed everyone into the same corner

Where we are, as of May 2026

1,200 AUTOMATED TESTS, EVERY PUSH	27 TEST FILES	33 BACKEND ENDPOINTS, 1 FUNCTION	185 RSS/ATOM NEWSWORTHY ITEMS
3 LANGUAGES (EN · PL · DE)	5 TIERS WIRED END-TO-END	5+1 AGENTS + ORCHESTRATOR LIVE	7 DETERMINISTIC CALCULATORS

Shipped

✓ Calculator engines	7 engines with full unit-test coverage
✓ Wizard	6-question flow with permalink, share, save-to-account
✓ AI agent suite	5 specialists + orchestrator, all live
✓ Compliance overlay	14 regimes · 32 trade-defence dossiers · 15 preferential-origin pathways
✓ Content library	180+ trilingual pages, all calculator-grounded
✓ Authentication	Magic-link via Resend, HMAC-signed cookies, KV-backed
✓ Saved plans	Per-user history with snapshot-at-save and "what's changed" diff
✓ Subscription tiers	5 tiers in lib/tiers.js with feature flags + quotas
✓ Stripe billing	Checkout + portal + idempotent webhook + /account/billing/
✓ Tier gating	Wired across all 5 agents + saved-plan POSTs
✓ Conversion analytics	KV event log + token-gated /dashboard/leads/
✓ Plan-revision diff	Snapshot at save, "what's changed since" callout on revisit
✓ Implementation roadmap	5-phase, 15–25-task conditional generator per plan
✓ Currency display toggle	EUR / USD / CNY / VND / PLN at snapshot rates
✓ RSS + Atom feeds	/feed.xml and /atom.xml, 185 items
✓ Marketplace shell	15 anonymised supplier exemplars

✓ Press & Partners	/press/ indexable, /partners/ ecosystem
✓ Outbound composer	Founder-grade cold-email tool routed through orchestrator
✓ Test discipline	1,200 automated tests, GHA CI on every push
✓ Operational hardening	.env.example, sitemap registration, daily content rotation

Deliberately deferred

Not because they're unimportant — because they're premature without traction:

- Live supplier directory — until 50 vetted suppliers consent and a vetting pipeline is operational
- Lead enrichment from LinkedIn URL — until inbound volume justifies a paid API
- Postgres migration — KV holds until 50+ paying users
- Mobile native app — browser-first SaaS; nothing in the product demands native
- Multi-tenant white-label — premature; no customer asking
- Languages beyond EN/PL/DE — until customer demand in another market

Status in one line — The platform is feature-complete. The 1,200-test CI gate ensures regressions cannot ship silently. The binding constraint is now go-to-market.

The 90-day plan

Channel 1 · The SEO content moat

180+ calculator-grounded pages ranking for long-tail queries that traditional ad-buyers cannot defend. Each page funnels into the wizard via pre-filled permalink; each wizard run captures an event into the conversion-analytics dashboard. **SEO traffic, product-led growth, and lead-gen are the same artefact.**

- *"duty on Chinese e-bikes into Poland"* → trade-defence dossier showing 87% combined AD+CVD with calculator link
- *"EUR.1 form Vietnam apparel EU"* → preferential-origin pathway with EVFTA walkthrough
- *"CBAM steel imports calculator"* → compliance overlay with HS-coverage table
- *"Bangladesh apparel EBA zero duty"* → worked example with full landed-cost breakdown

Channel 2 · Free tier as wedge

The free Compliance Agent runs on a question every EU SME importer needs answered: "what regulations apply to my product, and what would they cost me?" This is a question competitors charge €1,000+ for and answer in two weeks. **We answer it in 90 seconds, cited against EUR-Lex.** Every run captures the customer into the durable event log.

Channel 3 · Founder-led outbound

The /agent/outbound/ tool drafts brand-voice-pinned cold emails from a brief (recipient, hook, goal, tone). Routed through the orchestrator. Built to scale founder-led GTM through the Polish-LinkedIn → discovery-call → Starter funnel.

Channel 4 · Partner referrals (inbound)

Forwarders, FX brokers, insurers, inspection agencies, compliance consultancies — listed at /partners/ across three relationship modes (Recommended / Referral / Commercial). Inbound from partners who recognise OrcaTrade fits a customer they cannot serve at this volume.

Channel mix by ICP

ICP	PRIMARY CHANNELS
Polish e-commerce	Polish-language LinkedIn · Allegro seller Facebook groups · Polish e-commerce Slack · founder-led outbound
German Mittelstand	German LinkedIn · trade advertorials (Logistik Heute, DVZ) · curated webinars with HK partners
Specialty retail	Founder-led LinkedIn · niche industry publications · partner-network referrals

Operational priorities · next 90 days

WORKSTREAM	STATUS
Production env-var setup on Vercel	Operational, runbook complete (.env.example)
Stripe price seeding (6 prices)	Operational, dashboard configuration
Resend domain verification	Operational, DNS-side
First 10 paying customers	Founder-led outbound + Polish e-commerce community seeding
Sentry / production error tracking	30-min integration once first customer signs up
Lighthouse / accessibility audit	Pre-scale-up hardening

Three founders · three jurisdictions · one platform

CEO

Oskar Klepuszewski

Chief Executive Officer

Architect of the platform. Built the calculator engines, the AI agent suite, the compliance overlay, and the 1,200-test CI gate. Polish-native, EN/PL/DE-fluent. Based in Warsaw.

COO

Arman Sirin

Chief Operating Officer

Operational lead — partner ecosystem, commercial relationships with forwarders/insurers/FX, and the GTM motion across the UK and DE markets. Based in London.

CSCO

Nigel Lam

Chief Supply Chain Officer

Asia-side supply chain. Hong Kong physical presence — supplier verification, sample consolidation, dispute resolution. The moat against pure-digital competitors. Based in Hong Kong.

Group structure

ENTITY	JURISDICTION	FUNCTION
OrcaTrade Holding Ltd	England & Wales	Top-level holding · investor-readiness · cross-border governance
OrcaTrade Polska sp. z o.o.	Poland	Warsaw commercial + engineering function
OrcaTrade Asia Ltd	Hong Kong	Asia-side supply-chain function · Director: Nigel Lam

Cap table at formation

HOLDER	SHARES	%	VESTING
Oskar Klepuszewski · CEO	300,000	30.00%	4-year vest · 1-year cliff · reverse vesting
Arman Sirin · COO	300,000	30.00%	4-year vest · 1-year cliff · reverse vesting
Nigel Lam · CSCO	300,000	30.00%	4-year vest · 1-year cliff · reverse vesting
Option Pool	100,000	10.00%	Allocatable by Board
Total	1,000,000	100.00%	

Governance highlights

- Board: three founder-directors. Oskar Klepuszewski serves as Chairman (no casting vote).

- Reserved Matters require **unanimous** founder consent — share issuance, M&A, IPO, budget approval, founder compensation.
- Deadlock procedure: 14-day cooling-off → CEDR mediation → Texas Shoot-Out as last resort.
- Drag-along threshold: **66.67%** — any two founders can compel a bona-fide sale. P. 16
- Restrictive covenants: 12 months post-cessation across UK / EEA / Switzerland / Hong Kong.
- Deferred compensation pre-Trigger; Trigger fires at €150k rolling revenue or €250k+ funding round.

What we're raising and what it buys

Pre-seed: €750k–€1.2M on a SAFE or convertible note. 18-month runway. Target close Q3 2026.

What the capital does

USE OF FUNDS	ALLOCATION	OUTCOME
Founder compensation (post-Trigger)	35%	Three founders on salaries that allow full-time commitment. Trigger fires on close.
Hong Kong operation	20%	Office, supplier-vetting headcount, sample consolidation infrastructure. The moat against pure-digital competitors.
GTM & founder outbound	20%	Polish & German LinkedIn campaigns, partner-network development, conference presence (Logistik Heute, DVZ).
Engineering & AI	15%	Compliance-overlay expansion (cosmetics, food, machinery deep-dives), supplier directory pipeline, Postgres migration at 50+ paying users.
Legal, compliance, governance	10%	Three-entity group setup costs, UK counsel for the Shareholders' Agreement, ICO/GDPR readiness, terms-of-service hardening.

What we'll have at 18 months

- **50–100 paying logos** across Polish e-commerce + German Mittelstand
- **€300k–€600k ARR** on a mix-weighted basis (Starter / Growth / Scale)
- **HK operation live** — supplier-vetting pipeline operational, first 50 vetted suppliers in marketplace
- **Series A-readable metrics** — net retention, gross margin, payback period — three quarters of clean numbers

What we will not do with the money

- **✗** Build a consumer mobile app. Browser-first SaaS; nothing in the product demands native.
- **✗** Buy a forwarder or a customs brokerage. Asset-light by design.
- **✗** Index Alibaba. Curation is the product; breadth is the anti-product.
- **✗** Expand to a fourth language. EN/PL/DE until a customer in a fourth market pulls us in.
- **✗** Hire a CMO or VP-Sales pre-Series-A. Founder-led GTM until €1M ARR.

The right investor for us

European-focused pre-seed funds with a track record in trade/supply-chain software, B2B SaaS, or AI infrastructure. Operator-angels welcome — particularly those with import/export or EU-regulatory backgrounds. We are **less interested** in marketplace-thesis funds (we are deliberately curated, not broad) and in funds whose thesis requires a consumer-app shape.

The technology is shipped. The 1,200-test CI gate ensures regressions cannot ship silently. What remains is go-to-market. The next 90 days are about converting that asymmetry — calculator-grounded numbers, citation-grounded recommendations, trilingual surface, Hong Kong presence — into the first ten paying logos.

The ten questions everyone asks

Q1 · "Doesn't Alibaba already do this?"

Alibaba is the front door. It's where the SME starts. We're the four steps that follow — verify the supplier, compute the duty, book the freight, finance the deal. Alibaba never surfaces CBAM exposure on a Chinese steel order; we do, on screen one.

Q2 · "Won't Flexport / Forto add this?"

They're forwarder-first by structure. Their commercial teams optimise for shipment volume, not for the SME who imports six containers a year. Compliance and sourcing are out of scope for their ICP. Even if they bolted on a copilot, they wouldn't sit in front of the SME's sourcing decision — they sit downstream of it.

Q3 · "Why won't SAP GTS / Oracle GTM beat you down-market?"

They'll never serve the €99/month customer. Their cost structure assumes six-figure implementations. Down-market is unprofitable for them by design. We're the layer between free-and-chaotic and €200k/year-and-enterprise.

Q4 · "What stops a well-funded US AI startup from copying you?"

Three things they can't quickly replicate: **(1)** the EU regulatory depth — 14 compliance regimes, 32 trade-defence dossiers, 15 preferential-origin pathways, all EUR-Lex-cited, all calculator-grounded; **(2)** the Hong Kong physical presence; **(3)** the trilingual EN/PL/DE surface that an American team can't write in their sleep. The combination — not any one — is the moat.

Q5 · "What's the AI vs. calculator split? Aren't you just an LLM wrapper?"

Every monetary number comes from a deterministic calculator. The LLM never produces a number that drives a business decision. Agents call calculators as tools; they don't estimate. This is the architectural rule, enforced at the import-graph level: no Anthropic SDK imports in `/lib/forecasting/`, `/lib/anomaly/`, `/lib/inventory/`, or `/lib/revenue/`.

Q6 · "How do you make money beyond subscriptions?"

Transactional. Per-shipment fees (€150–€2,500), 8–15% freight markup from forwarder partners, customs-clearance fees, inspection coordination, cargo-insurance commission, trade-finance referral economics. A Growth-tier customer routinely lands in the €8k–€15k ACV band once they ship at expected frequency.

Q7 · "What's the cost to acquire a customer?"

Pre-traction projection: ~**€600 blended CAC** against an LTV of €4,500+ on Starter, €15k+ on Growth. SEO content moat is the cheap channel (free per page, expensive in aggregate authorship — but already shipped). Founder outbound is cheap-but-slow. Partner referrals are unpaid and inbound. The economics work as long as content compounds.

Q8 · "What's your biggest risk?"

GTM execution. The technology risk is behind us; the customer-acquisition risk is in front. Our mitigation is **(a)** a founder team where one founder builds, one sells, one operates Asia; **(b)** a free tier that captures every Compliance-Agent user into the funnel; **(c)** a content library that compounds whether or not we spend on ads.

Q9 · "Why are you the team to do this?"

A founder who built the platform end-to-end (calculators, agents, compliance overlay, 1,200-test gate); a COO running EU commercial relationships out of London; a CSCO with physical Hong Kong presence and personal supplier relationships. Three jurisdictions, three languages, and one product. Few teams in the space combine all three.

Q10 · "What happens if Anthropic raises prices, or there's an API outage?"

Calculator engines run independently — agent unavailability degrades to "AI features temporarily unavailable" without breaking pricing, checkout, or saved plans. On pricing: AI cost-of-goods is a single-digit percentage of subscription revenue; meaningful margin pressure requires Anthropic to raise prices 5–10× without competition responding.

What we say × who we say it to

MESSAGE	POLISH E-COMMERCE	GERMAN MITTELSTAND	SPECIALTY RETAIL
Hero hook	"Stop running imports out of email threads."	"Regulatory precision at SME pricing."	"From sample to shelf with one partner."
Lead with	Compliance Agent + Routing	Compliance Agent + audit trail	Sourcing Agent + sample-management
Defuse objection	"Built by Polish operators — interface in PL/EN/DE."	"Citations from EUR-Lex on every regulatory claim."	"HK office, in-person QC, returns handled."
Pricing emphasis	Free entry + €99 Starter	€399 Growth + custom Enterprise	Per-shipment fees over subscription
Proof point	"Polish SMEs have been overpaying forwarders 30–40% for years. The Routing tool shows the gap."	"CBAM exposure calculator with snapshot ETS pricing — defensible numbers, audit-ready."	"HK office runs sample consolidation; you don't ship 5 separate parcels."

What NOT to say

VOCABULARY TO AVOID

- ✗ "Disrupt" — we complement forwarders, not replace them.
- ✗ "AI-first" — descriptive of how we built it, not a claim about the product.
- ✗ "Save 50% on shipping" — we don't make that claim; not consistently true.
- ✗ "Trusted by industry leaders" — without named logos, hollow.
- ✗ "Easy", "simple", "seamless" — show, don't claim.
- ✗ "Excited to announce" — start with the news, not your feelings.

VOCABULARY TO USE

- ✓ "Most importers don't know that..." (sets up a specific insight)
- ✓ "On a typical {weight}-kg shipment from {origin} to {destination}..."
- ✓ "We benchmark against..." / "We saw {n} of these last quarter"
- ✓ "The math is..."
- ✓ Specific country and HS-code references
- ✓ Numeric proof points over adjective stacks

The voice rule, in one sentence

OrcaTrade sounds like a senior trade operator who's run Asia-Europe shipments for a decade. Speaks plainly. Cites numbers. Names specific factories, specific HS codes, specific routes. Never generic. Never

breathless.

Cold outreach & discovery

Cold email · ICP 01 · Polish e-commerce

Subject: 30-40% – that's what Polish FBA sellers overpay on Vietnam freight

Cześć {name},

Run the math on your last container from VN/CN — sea, rail, and air priced side by side, your real HS-code duty calculated against current TARIC, and whether EVFTA preferential origin would zero out the duty.

Free. 90 seconds. **orcatrade.pl/start**

We built this because the Polish e-commerce founders in our network were paying forwarders 30-40% over what the route actually costs. The calculator shows the gap. We don't sell freight — we sell the platform that lets you see what your freight should cost.

Oskar

Cold email · ICP 02 · German Mittelstand

Subject: CBAM exposure on your Q2 steel imports – calculated against current ETS pricing

Sehr geehrte/r {name},

CBAM enters the definitive period in 2026 and your steel imports are in scope under Annex I. We've built a compliance calculator that takes your HS code, your origin country, and your tonnage, and returns your indicative CBAM exposure against snapshot ETS pricing — cited against the relevant Implementing Regulation by celex number.

Audit-ready. Three minutes. Free.

orcatrade.pl/agents/compliance

If the numbers surprise you, we offer a Growth-tier subscription (€399/Monat) with quarterly reporting templates and an audit trail per shipment.

Mit freundlichen Grüßen,
Arman Sirin · COO

Discovery call · opening question matrix

PHASE	THE QUESTION	WHY WE ASK
Open	"Walk me through how your last container went — from RFQ to warehouse arrival."	Surfaces the patchwork process and the actual pain.
Quantify	"On that shipment, what was your landed cost per unit vs. what you'd budgeted?"	Anchors the conversation in numbers.
Compliance probe	"Did your customs broker raise CBAM / EUDR / REACH on that shipment?"	Reveals the gap between what's compliant and what was filed.
Frequency	"How many shipments are you running this year?"	Tier-fits to Starter / Growth / Scale.
Decision	"If we could show you the duty + freight + FX gap on your next shipment in 5 minutes, would you take that call?"	Closes to demo or to wizard run.

Pitch closers · by length

- **One-line** · "We're the layer between Alibaba and the EU shelf."
- **Two-line** · "We give the European SME importer the AI version of a 50-person trade-operations team — for €99–€999 a month. Every number is calculated. Every regulation is cited." P. 20
- **Three-line** · "The technology is built. 1,200 tests. 180 trilingual pages. Five agents. The next 90 days are about converting that into the first ten paying logos."

Brand & evidence

Brand palette

Print & deck — warmer, higher-contrast extension of the web palette.

NAME	HEX	USE
Deep Navy	 #0a1628	Cover, formal documents, primary text on light
Mid Navy	 #0f2540	Section dividers, sub-headings in long docs
Ivory	 #f5efe2	Document background, primary text on dark
Brand Gold	 #c8a85a	Heritage accent — rules, kickers, highlights on dark
Light Gold	 #d4b97a	Gold gradients, hover states
Error	 #e15c5c	Errors only — never for warnings or alerts

Typography

ROLE	FAMILY	USE
Display & headings	Cormorant Garamond / Garant · 400–700	Page heroes, section headings, stat numbers, callouts, pull-quotes
Body & UI	Geist Sans (web) / Inter (print) · 400–700	Paragraphs, navigation, captions
Code & data	Geist Mono · 400–500	Numbers in stats, HS codes, file paths, citation chips

Source documents

Every claim in this kit traces to one of the following internal source documents:

- /docs/company-overview.md — canonical product, business model, and roadmap reference
- /docs/strategic-platform-plan.md — long-form thesis and platform strategy
- /docs/founder-term-sheet.md — cap table, governance, vesting, leaver provisions
- /docs/brand-kit/ — identity, colour, typography, voice, messaging (10 files)
- /lib/tiers.js — pricing tiers, entitlements, quotas (single source of truth)
- /lib/intelligence/*-quote.js — the seven calculator engines

Citations & evidence discipline

- Every regulatory claim cites EUR-Lex by celex number.

- Every AD/CVD figure cites the relevant Implementing Regulation.
- Every monetary number in the platform traces to a deterministic calculator with full unit-test coverage.
- Every worked example links to the specific regulation that drives the duty rate.
- If we cannot cite it, we don't claim it. If we cannot calculate it, we say so.
